CEU

GAME: The 4% Roulette

Roleplay: You are the Chief Marketing Officer (CMO). You are about to launch these three campaigns.

Vote: Are they safe to launch, or will they trigger a massive regulatory fine?

Brand A

"Our new sneakers are **100% Eco-Friendly!***"*

Brand B

"Carbon Neutral Water, **certified by our own team***."*

Brand C

"Made with 30% recycled plastic **(packaging)."**

GAME: The 4% Roulette

Roleplay: You are the Chief Marketing Officer (CMO). You are about to launch these three campaigns.
Vote: Are they safe to launch, or will they trigger a massive regulatory fine?

Brand A

"Our new sneakers are **100% Eco-Friendly!***"*

Brand B

"Carbon Neutral Water, **certified by our own team***."*

Brand C

"Made with 30% recycled plastic **(packaging)."**

THE BOARDROOM REALITY

Under the EU Green Claims Directive, **ALL THREE ARE ILLEGAL**.

Penalty: Up to **4% of your annual global turnover**. Welcome to the Regulatory Tsunami.

1. The EGD: A New Economic Reality

The European Green Deal is **NOT** *an environmental plan.*
It is the EU's master **economic growth strategy** *to become climate-neutral by 2050.*

The Past
Voluntary CSR
(PR & Philanthropy)

The Regulatory Shift
$\longrightarrow$

The Present
Mandatory ESG
(Core Business Strategy)

The Business Implication (Marketing & ADE):
Non-compliance no longer means just "bad press". It results in **financial exclusion** — locking your firm out of capital markets and public tenders.

The Rules of the Game: CSRD & ESRS

Moving from vague sustainability promises to **auditable financial-grade data**.

CSRD

Corporate Sustainability Reporting Directive

THE MANDATE (The "What"):
Requires large & listed companies to publish mandatory reports on their environmental and social impact.

Executed via

ESRS

European Sustainability Reporting Standards

THE MANUAL (The "How"):
Provides the exact, standardized KPIs to measure that impact, ensuring comparability across the EU.

→ **The Marketing Reality: If you cannot measure a claim using ESRS KPIs, you cannot legally market it. Greenwashing is now a quantifiable offense.**

The Death of PR: Why ESRS Emerged

To fund the Green Deal, the EU requires private capital. Capital allocation demands **comparability**, *which glossy PR brochures cannot provide.*

The Era of CSR (PR)

- ✗ **Focus:** Marketing & Brand image.
- ✗ **Output:** Glossy reports with smiling photos and isolated anecdotes.
- ✗ **Result:** Unquantifiable and impossible for investors to compare.

→

The Era of ESRS (Finance)

- ✓ **Focus:** Accounting & Risk.
- ✓ **Output:** Standardized metrics (Carbon, Water) treated like EBITDA.
- ✓ **Result:** Legally auditable data, ready for capital markets.

→ **The New Rule of Thumb: If your sustainability report reads like a marketing brochure, it is illegal under ESRS.**

The Methodology: Double Materiality

This is the core of modern analysis: It is no longer just about "doing good"; it is about **fiduciary duty** *and holistic risk management.*

1. Financial Materiality

OUTSIDE → IN

How sustainability risks (e.g., carbon taxes, droughts) impact the company's

Profitability & Enterprise Value.

2. Impact Materiality

INSIDE → OUT

How the company's daily operations and value chain impact

People & The Planet.

The Intersection = Strategic Priority

Double Materiality: The Reality Check

Double Materiality is **not** *a checklist of PR good deeds. It is a strict financial filter identifying where planetary risks intersect with business continuity.*

The Beverage Brand

→ Impact (Inside → Out)
Massive plastic packaging pollution.

← Financial (Outside → In)
Regional droughts halt bottling plants.

Core Materiality:

Water Stewardship & Circularity.

The Software Firm

→ Impact (Inside → Out)
Data center grid emissions (Scope 2).

← Financial (Outside → In)
High energy costs & data privacy fines.

Core Materiality:

Energy Efficiency & Data Security.

THE GREENWASHING TRAP (Misaligned Materiality)
A software firm running a highly-publicized **"Beach Cleanup"** campaign is ignoring its true materiality. It generates PR, but fails the ESG audit because it ignores its core systemic risks (Energy).

Double Materiality in Action: The N & P Shock

Why should a Marketing CMO or a Financial Analyst care about Phosphorus?

1. Ecological Impact (Inside → Out)

Excess N & P from farms washes into rivers and oceans, feeding toxic algae.

This creates massive **"Dead Zones"** where no marine life can survive.

→ **Result:** Collapse of the regional fishing industry.

2. Financial Risk (Outside → In)

Phosphorus is a finite, mined resource. We are fast approaching **"Peak Phosphorus"**.

As soil degrades and P becomes scarce, global fertilizer prices explode.

← **Result:** Supply chain inflation.

⚠ THE BOTTOM LINE FOR FMCG

For food giants (Nestlé, Danone, Kraft), the N & P boundary is not an ecological footnote; it is a **direct threat to their profit margins and food security**.

WORKSHOP: The Materiality Boardroom

15 MINUTES

Your Role: Risk Consultants — **Audience:** The Board of Directors (Professor)

Teams A & B: "NovaStyle"

Industry: Ultra-Fast Fashion

Teams C & D: "DataSphere"

Industry: Cloud Storage Tech

Your Deliverable (The Pitch):

1. Name **two** Financial Risks. 2. Name **two** Impact Risks.
3. **The Hook:** Argue how ignoring the planet (Impact) will eventually destroy your ROI (Financial).

The Consultant's Cheat Sheet

Use this matrix to scan your Executive Brief. Look for these specific signals.

Financial (Outside → In)

How the world impacts the company.

- Carbon taxes & direct fines
- Supply chain disruption (droughts)
- Energy price volatility
- Loss of investor capital / Bad loans

Impact (Inside → Out)

How the company impacts the world.

- Microplastics pollution
- Human & Labor rights violations
- Massive E-waste generation
- Ecosystem water depletion

Pro-Tip: The best pitches find the hidden connection between the right card and the left card.

The Methodology: Life Cycle Assessment (LCA)

Moving from "Eco-Fluff" to Quantifiable Truth:
The **Cradle-to-Grave** *analytical framework.*

1. Extraction → 2. Production → 3. Use Phase → 4. Disposal

The Hidden Reality
80% of Impact occurs here.

(Toxic chems, Water stress, Labor risk)

Market-ing Trap

Claiming "Sustainable"

just for paper packaging.

→ **The Marketing Imperative: You cannot build a modern brand on partial truths. Use full LCA data to construct evidence-based, legally compliant value propositions.**

Demystifying LCA: The 5-Stage Audit Trail

An LCA is an exhaustive forensic audit of a product's life. If you ignore a single stage, your marketing claim is a **legal liability**.

1. Extraction

Are raw materials (e.g., Lithium, Cotton) mined using child labor or deforestation?

→

2. Production

Is the factory powered by coal or solar? Are toxic chemicals dumped?

→

3. Distribution

Are we flying the product (high carbon) or using localized supply chains?

→

4. Use Phase

Does the consumer need massive electricity or hot water to use it?

→

5. End-of-Life

Can it actually be recycled, or will it sit in a landfill for 500 years?

Rule: You cannot claim "Sustainability" in Stage 5 if you destroyed the ecosystem in Stage 1.

LCA in Action: The "Eco-Friendly" Cotton Paradox

A fashion brand bans plastic bags and offers organic cotton tote bags, claiming they are "saving the planet". Let's check the LCA data.

The Marketing Claim

"Plastic is evil. Natural cotton is good for the Earth."

✗ *Intuition-based metric.*

The LCA Reality Check

To offset the massive water and land-use footprint of cotton agriculture (Extraction Phase), you must reuse the tote bag:

20,000 x

...compared to a single-use plastic bag.

**Source: Danish Environmental Protection Agency*

→ **The ADE Lesson: Intuition is a liability in sustainability. "Natural" does not equal "Sustainable". If you don't follow the LCA data, your marketing is legally vulnerable.**

The Intuition Trap: Why LCA is Non-Negotiable

If you rely on "common sense" in sustainability, your brand is legally vulnerable. Intuition is the mother of all Greenwashing.

The "Common Sense" Myth

"Plastic is always evil. Natural materials like paper and organic cotton are inherently better for the planet."

✗ Flaw: Ignores extraction & transport.

→

The LCA Reality

Cotton demands massive water and land clearing (habitat loss).

Paper drives higher transport emissions due to its heavy weight.

✓ Truth: Data reveals the real impact.

→ **The Golden Rule: Never approve a claim without primary data. If the engineers haven't measured it from Cradle-to-Grave, the marketers cannot legally sell it.**

Green Claims Directive: The End of Greenwashing

The EU is shifting environmental marketing from "creative copywriting" to **strict financial compliance**.

The New Marketing Filter

1. Substantiation

Claims must be backed by strict scientific evidence (Life Cycle Assessment - LCA).

2. Verification

Mandatory independent third-party audit *before* the campaign goes live.

3. Communication

Total ban on generic terms ("Eco-friendly", "Green", "Climate Neutral").

The Cost of Lying

Financial Penalties:

- Fines up to **4% of annual global turnover**.
- Exclusion from public procurement.
- Confiscation of revenues tied to the product.

Strategic Rule: Marketing must now work directly with Operations. **If the engineers can't prove it, the agency can't print it.**

Deconstructing a Claim: The Autopsy

How to stress-test a sustainability claim **before** *launching a campaign. Read the fine print.*

"Our new sneakers are made with **50% recycled ocean plastic***!"*

The Trade-off

What is the other **50%** made of? Is it highly toxic virgin plastic?

Rebound Effect

Did mixing **recycled** plastic with glue make the shoe impossible to recycle later?

Vagueness Test

Was the **ocean plastic** floating in the sea, or collected 50km inland?

The Marketer's Investigation Protocol

How do you investigate a claim before putting your company at a **4% revenue risk***?*

1. Interrogate Supply Chain

Do not accept a supplier's word. Ask for the primary data.

"Show me the energy bill of the factory."

2. Check The Scope

Does the claim cover the whole company or just one minor product line?

(e.g., An oil company bragging about one single solar farm).

3. Demand Verification

Under the new EU Directive, self-declarations are completely dead.

Must be audited by an accredited independent body.

→ **The Golden Rule: If it is not externally audited and backed by primary data, DO NOT PRINT IT.**

Executive Brief: Week 2 Takeaways

The paradigm has shifted. Sustainability is no longer a PR exercise; it is the **core fiduciary duty** *of the modern firm.*

1. The Law

The End of "Eco-Fluff"

The EU Green Deal turned PR into strict corporate law.

Ignorance is no legal defense.

2. The Math

Data, not Feelings

Double Materiality connects limits to financial risk.

LCA *provides math truth.*

3. The Value

Evidence-Based Growth

Marketing is now about verified, audited excellence.

Gains advantage & avoids 4% fines.

Task 1: The Sustainability Strategist Carousel

MISSION SPECS

Deadline: Next Monday, 16:00h — **Format:** LinkedIn Carousel — **Submit:** Drive / Social Link

1. The Hook

Identify a core problem from Week 1 or 2.

(e.g., The Paradox of Growth, Regulatory Tsunami).

→

2. Regulation

Translate a technical concept (CSRD, Double Materiality) so a **CEO** understands it instantly.

→

3. Business Case

Show a real-world example.

✔ **Winner** *vs.*
✘ **Loser**

(Solution vs. Failure).

→

4. The ROI

Why does this guarantee survival and growth?

(Brand value, fine reduction, capital access).

(4 to 8 slides/scenes **Slides 5-8 (Optional):** Deep dive into LCA data or a strong Call to Action.;

Looking Ahead... Week 3 Teaser

CEU

THE REALITY CHECK

The linear model ("Take-Make-Waste") is dead.

The EU is heavily fining companies that lie about their impact.

How do we actually make money now?

Next Session

We will explore the **Circular Economy** and **Sustainable Business Models**.

How Patagonia & Philips decouple revenue from resource extraction.

The Shift

We are moving from fixing the marketing brochures...

...to hacking the entire supply chain.

Thank You.
